### Sure Bet Program: Project Snapshot

## Casino Taps into Energy Savings with Variable Speed Drives

**PROJECT SUMMARY**

Building Type: Retrofit

Measure: Variable speed drives (VSDs) installed on water booster pumps

Sure Bet Incentive: \$5,263

Annual Projected Electricity Savings: 173,101 kWh

Annual Energy Cost Savings: \$16,445

An effective water distribution system is a key component to smooth hotel operations and guest satisfaction. The system also has a significant impact on total energy use. The Atlantis Casino Resort Spa in Reno used an incentive from the Sure Bet program to offset the cost of improving the efficiency of its water pumping system.

The Atlantis Casino Resort Spa relies on a pumping system with three motors, one 20 hp and two 30 hp, to maintain adequate water pressure. This critical system delivers water to more than 600 guest rooms and four commercial kitchens. It must maintain pressure during all levels of occupancy and activity.

**Matching Speed to Need**

The chief engineer, David Hiday, recognized an opportunity to capture measurable energy savings by installing variable speed drives on the domestic water booster pumps. A variable speed drive (VSD) is a device that controls the speed of an induction, or constant-speed, motor. A VSD adjusts a motor's speed in response to changing demand, which can significantly reduce energy use and cut wear on the motor.

Prior to adding the VSDs the #1, 20 hp pump operated continuously to meet demand. Pumps #2 and #3 cycled on if water pressure dropped below a certain level. The #2, 30 hp pump frequently cycled on and off at 15-minute intervals and operated most of the time. The #3, 30 hp pump operated as needed. This inefficient pump sequence operation wasted energy.
